or mechanical, including photocopy, recording, or any information storage and retrieval system, with
permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates
copyright owner's consent that copies of the article may be made for personal or internal use, or for
personal or internal use of specific clients. This consent is given on the condition, however, that
copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress St
Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the
Copyright Law. This consent does not extend to other kinds of copying, such as copying for general
tribution, for advertising or promotional purposes, for creating new collective works, or for resale. C
fees for pre-1987 articles are as shown on the article title pages; if no fee code appears on the title p
the copy fee is the same as for current articles.

CONTENTS OF VOLUME 68

NUMBER 1, JANUARY 1987

VIN W. THOMPSON. Time Dependent Boundary Conditions for Hyperbolic Systems 1

D. HENSHAW. A Scheme for the Numerical Solution of Hyperbolic Systems of Conservation Laws 25

RRY MARDER. A Method for Incorporating Gauss' Law into Electromagnetic PIC Codes 48

C J. HOROWITZ. Vectorizing the Interpolation Routines of Particle-in-Cell Codes 56

K. SARKAR AND M. A. PRASAD. A Comparative Study of Pseudo and Quasi Random Sequences for the Solution of Integral Equations . . . 66

AK H. OZA AND JOSEPH CALLAWAY. Numerical Solution of the Schroedinger Equation with a Non-local Exchange Kernel 89

H. RAWITSCHER AND E. S. HIRSCHORN. Accurate Evaluation of an Integral Involving the Product of Two Bessel Functions and a Gaussian 104

E. KUNHARDT AND C. WU. Towards a More Accurate Flux Corrected Transport Algorithm 127

C. YEE. Construction of Explicit and Implicit Symmetric TVD Schemes and Their Applications 151

FRIEDMAN AND A. RABINOVITCH. Improved Regula Falsi Method for Solving the Schrödinger Equation with a Piecewise Constant Potential 180

BUENDÍA, R. GUARDIOLA, AND M. M. MONTOYA. Integral Equations: A Tool to Solve the Schrodinger Equation 188

EXANDER J. KLIMAS. A Method for Overcoming the Velocity Space Filamentation Problem in Collisionless Plasma Model Solutions . . . 202

M. BARBOUR, N.-E. BEHILIL, P. E. GIBBS, M. RAFIQ, K. J. M. MORIARTY, AND G. SCHIERHOLZ. Updating Fermions with the Lanczos Method 227

HALY MEZEI. Adaptive Umbrella Sampling: Self-consistent Determination of the Non-Boltzmann Bias 237

T OF FORTHCOMING ARTICLES 249

NUMBER 2, FEBRUARY 1987

N MIN HSIA AND YIH NEN JENG. The Weak Nonlinear Instability of Euler Explicit Scheme for the Convective Equation 251

N R. BENNETT AND JOAN E. CAMPBELL. Accuracy of a Finite-Difference Method for Computing Lake Currents 262

JOHN R. BENNETT AND ANNE HUTCHINSON CLITES. Accuracy of Trajectory Calculation in a Finite-Difference Circulation Model 2
PAOLO LUCHINI. An Adaptive-Mesh Finite-Difference Solution Method for the Navier–Stokes Equations 2
NICO BOOIJ AND LEO H. HOLTHUIJSEN. Propagation of Ocean Waves in Discrete Spectral Wave Models 3
V. GIOVANGIGLI AND M. D. SMOOKE. Calculation of Extinction Limits for Premixed Laminar Flames in a Stagnation Point Flow 3
AHMED F. GHONIEM AND YVES CAGNON. Vortex Simulation of Laminar Recirculating Flow 3
JEFFERSON FONG AND LAWRENCE SIROVICH. Supersonic Inviscid Flow—A Three-Dimensional Characteristics Approach 3
FELICJA MRUGAŁA. Hybrid Approximate Solution–Approximate Potential Approach to the Solution of Coupled Equations for Atom–Molecule Reactive Scattering 3
J. P. KRESKOVSKY AND H. L. GRUBIN. Application of LBI Techniques to the Solution of the Transient, Multidimensional Semiconductor Equations 4
NORMAN L. WHITLEY. Potential Flow past a Sinusoidal Wall by Direct Variation 4
H. KAPITZA AND D. EPPEL. A 3-D Poisson Solver Based on Conjugate Gradients Compared to Standard Iterative Methods and Its Performance on Vector Computers 4
J. D. SHERWOOD. Unstable Fronts in a Porous Medium 4

NOTE

AUTHOR INDEX FOR VOLUME 68 . . . . . .

Journal of Computational Physics

INFORMATION FOR AUTHORS

ıe purpose of the *Journal of Computational Physics* is to publish articles concerning techniques loped in the solution of data handling problems and mathematical equations, both arising in the ription of physical phenomena.

anuscripts should be submitted to: *Journal of Computational Physics*, Lawrence Livermore National oratory, University of California, P. O. Box 5509, L-561, Livermore, California, 94550.

riginal papers only will be considered. Manuscripts are accepted for review with the understanding the same work has not been and will not be nor is presently submitted elsewhere, and that its sub- ion for publication has been approved by all of the authors and by the institution where the work carried out; further, that any person cited as a source of personal communications has approved citation. Written authorization may be required at the Editor's discretion. Articles and any other rial published in the *Journal of Computational Physics* represent the opinions of the author(s) and ld not be construed to reflect the opinions of the Editor(s) and the Publisher.

ıthors submitting a manuscript do so on the understanding that if it is accepted for publication, right in the article, including the right to reproduce the article in all forms and media, shall be ned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author ermission to reproduce any of his or her contributions to the journal.

rm of Manuscript. Manuscripts should be typewritten with wide margins on high quality 8.5×11 paper, using double spacing throughout. The original and two copies should be submitted; ever, in order to expedite handling of manuscripts, the original and four copies would be desirable. es should include figures and tables.

ch page of the manuscript should be numbered. The first should contain the article title, author and thor names and complete affiliation(s). At the bottom of this page, the number of manuscript pages, es, and tables should be noted. The second page should contain a proposed running head of less thirty-five characters. It should also contain the name and complete mailing address of the person hom proofs are to be sent.

ith the exceptions noted below, authors should be guided by the *Style Manual*, 1978, of the rican Institute of Physics.

bject Classification. As of January 1981 authors are required to classify their own manuscripts the 1980 *Mathematics Subject Classification*, reprinted from the 1978 *Mathematical Reviews Index*, 27–S34, with the additional classifications listed in the January 1, 1981 issue. Authors are requested ıoose at least two categories, one in numerical analysis category, 65, and one other, generally a cal classification, from the categories beyond 65. Page one should contain at least two such fication index numbers, as well as a few key words.

stract. Page 3 should contain a short abstract.

t of Symbols. It is of vital importance that the author submit a complete list of symbols. The sym- used should be identified for the typesetter **phonetically.** This list will not appear in print, but is tial to avoid costly corrections in proof.

bles. Number tables consecutively with Roman numerals. Extensive tables will be reproduced as engravings, and should be typed carefully in the **exact** format desired. Authors will be charged for ıew engravings necessitated by changes in proof. Use superscript lowercase italic letters (*a*, *b*, *c*) for footnotes, which should be typed immediately below the table. Type tables at least double-spaced, ding titles and footnotes. Do not underline table titles; reserve underlining for text that is to be *zed.*

Equations. Equations should be typewritten whenever possible, and the number placed parentheses at the right margin. Reference to equations should use the form "Eq. (3)" or simply " Superscripts and subscripts should be typed or handwritten clearly above and below the line, res tively. Use the exponent $^{1/2}$ whenever possible.

References. References should be cited in the text by a number in square brackets. Literature should appear on a separate page at the end of the article, and should be styled and punctu according to the following examples:

1. D. SCHNACK AND J. KILLEEN, *J. Comput. Phys.* **35**, 110 (1980).
2. I. GOHBERG, P. LANCASTER, AND L. RODMAN, *Matrix Polynomials* (Academic Press, York, 1982), p. 54.
3. R. GROSS, M. KOYANAGI, H. SEIFERT, AND R. P. HUEBENER, in *Proceedings, 17th Int. Con Low Temperature Physics, Karlsruhe, West Germany, 1984*, edited by U. Eckern *et al.* (No Holland, Amsterdam, 1984), p. 431.

For unpublished lectures of symposia, include title of the paper, name of the sponsoring society in and date. For journal names, follow the style of *Chemical Abstracts Service Source Index*, Abbreviation of AEC Laboratory Report names should follow the style of *Nuclear Science Abstrac*

Footnotes. Footnotes in the text should be avoided if at all possible. If they must be used, identi superscript numbers and type together on a separate page, double spaced.

Figures. All illustrations are to be considered as figures. Number each graph or drawing in sequ with Arabic numerals. Supply a descriptive legend for each figure. Type legends double-spaced secutively on a separate page. The **original** figures are required. Copies are **unacceptable.**

Plan figures to fit the proportion of the printed page. Use a professional lettering set on the origin that the letters and numbers are large enough and "open" enough to take a reduction of 50 to without filling in with ink. Do not include background grids; however, on paper with blue lines the can be eliminated in the process of photoreproduction. Identify each figure in a margin with the nar the journal, author's name, and figure numbers; avoid marking the backs of figures.

Proofs. Proofs will be sent to the author with a reprint order form. Authors will be charge alterations in excess of 10% of the cost of composition.

Reprints. Fifty reprints without covers will be provided free of charge. Additional reprints ma purchased.

Notes

Short notes regarding the availability of interesting and useful new programs or tabular materia be considered for publication. Letters to the Editor commenting on articles already published in Journal will also be considered. Neither notes nor letters should have an abstract.
